

Factsheet

Test Servers – Shared servers

Shared servers

Shared servers.

Shared off-net servers are existing SamKnows servers that are used by multiple clients. SamKnows manages these servers and ensures that customers do not cause contention via our traffic monitoring tools.

Locations

Shared servers are available in selected locations in Europe & North America:

Country	City
United States	New York
United States	Los Angeles
United Kingdom	London
Croatia	Zagreb
France	Paris
Germany	Frankfurt
Hungary	Budapest
Ireland	Dublin
Latvia	Riga
Luxembourg	Luxembourg
Netherlands	Amsterdam
Poland	Warsaw
Romania	Bucharest
Spain	Madrid

Who are shared servers good for?

You should use shared servers if:

- You are running a small project with a low bandwidth overhead
- You are not concerned with where the servers are placed

- You wish to save costs but still have all test metrics available to you

You should *not* use shared servers if:

- You are testing high-speed connections or with a large number of users
- You have specific requirements over the location of the test servers
- You do not wish to risk any contention of bandwidth
